

FOET and TSbB

Further Offshore Emergency Training with Emergency Breathing System and Travel Safely by Boat

The aim of the FOET and TSbB is to provide the learners with the opportunity to practise and demonstrate emergency response skills which are not possible to practise during drills, exercises and emergency training offshore. This course is a refresher option for the BOSIET / T-BOSIET courses.

This programme is designed to meet the further offshore safety and emergency response training requirements for personnel working in the offshore oil and gas industry who will be supplied with rebreather emergency breathing system (EBS) during offshore helicopter travel.

This course is also available with Shallow Water Compressed Air Emergency Breathing Systems (CA-EBS).

General Course Objectives

The objectives of the FOET are that learners will be able to:

- Demonstrate, in a simulated environment, that they can use the safety equipment and follow procedures in preparing for and during helicopter emergencies – with particular focus on escaping from a helicopter following ditching.
- Demonstrate that they can use basic firefighting equipment effectively, and use self-rescue techniques in low visibility and completely obscured visibility situations e.g. smoke filled areas.
- Demonstrate that they can perform basic first aid.

Course Content

- Fire Fighting & Self Rescue practical exercises
- Sea Survival & Lifeboat (TEMPSC) practical exercises
- First Aid & Hypothermia theory & practical exercises
- Helicopter Safety Procedures & Helicopter Underwater Escape Training (HUET) practical exercises, including the use of Emergency Breathing Systems (EBS) and Survival Suits.
- Boat transfer exercises
