

T-HUET

Tropical Helicopter Underwater Escape Training

The Tropical HUET training programme will prepare learners that intend to travel to and from offshore oil and gas installations and vessels by helicopter in a tropical environment by providing specific training in pre-flight and in-flight requirements and to equip delegates with the basic emergency response knowledge and skills required in the event of a helicopter emergency – with specific focus on escaping from a helicopter following ditching and sea survival techniques.

This course can also be delivered with the additional Emergency Breathing System (EBS) or Shallow Water Compressed Air Emergency Breathing System (CA-EBS) training.

General Course Objectives

The objectives of T-HUET are that learners will be able to:

- Demonstrate, in a simulated environment, that they can use the safety equipment, and follow procedures in preparing for, and during helicopter emergencies – with particular focus on escaping from a helicopter following ditching.
- Demonstrate sea survival techniques.

Course Content

- Course introduction
- Check-in / boarding procedures
- In-flight, landing, disembarking
- Helicopter Safety requirements
- Helicopter Escape / Hazards during emergencies
- Pre-ditching checks / Actions after ditching
- Surface & Underwater Escape
- Escape training session (METS™), using mechanical and push out windows
